

AMENDMENTS TO THE CLAIMS:

1. (Currently Amended) A remote control system for carrying out remote control setting processing and remote control operation processing, comprising:

a registration table storage device storing a registration table;

a receiver receiving a signal from a remote controller and decoding the signal to a remote code during the remote control setting processing and the remote control operation processing;

a remote code determiner determining whether or not the remote code obtained by said receiver has been registered in the registration table during the remote control setting processing;

a first register firstly registering a first selected operation of a program corresponding to the remote code obtained by said receiver in a the registration table when said remote code determiner determines that the obtained remote code has not been registered in the registration table;

a registration determiner determining whether or not a second selected operation of a program should be registered corresponding to the obtained remote code when said remote code determiner determines that the obtained remote code has been registered in the registration table;

a second register registering the second selected operation of the program corresponding to the obtained remote code in the registration table when said registration determiner determines that the second selected operation of the program should be registered corresponding to the obtained remote code;

~~and secondly registering another selected operation of a program corresponding to the obtained remote code in the registration table during the remote control setting processing;~~

a an execution determiner determining whether or not the remote code obtained by said receiver has been registered in the registration table during the remote control operation processing; and

an executor executing the first selected operation or the first and second selected operations of the program corresponding to the obtained remote code in the registration table when said execution determiner determines the obtained remote code has been registered in the registration table.

2. (Canceled)

3. (Currently Amended) The remote control system according to claim 1, further comprising:

an operation table having a plurality of operations of the program and a plurality of operation identifiers corresponding to said plurality of operations of the program; and wherein said first and second register each includes:

an identifier selector selecting the operation identifier corresponding to the first or second selected operation of the program from said operation table; and

an identifier register registering the obtained remote code corresponding to the selected operation identifier in said registration table.

4. (Currently Amended) The remote control system according to claim 1, wherein said first and second register each includes:

a resource identifier identifying one of data resources; and

a resource register registering the obtained remote code and the identified data resource corresponding to the obtained remote code in said the registration table, and said executer executor opens the data resource corresponding to the obtained remote code using the program.

5. (Currently Amended) The remote control system according to claim 1, further comprising:

an operation table having a plurality of input operations and a plurality of operation identifiers corresponding to said plurality of input operations, and wherein said first and second register each includes:

a program selector selecting one of programs;

an obtainer obtaining an input operation from an input device,

an identifier determiner determining the operation identifier corresponding to the obtained input operation in said operation table; and

an identifier register registering the selected program and the determined operation identifier in said the registration table.

6. (Currently Amended) The remote control system according to claims 1, wherein said first register registers a message corresponding to the obtained remote

code in said the registration table,

said remote control system further comprising a display displaying the message corresponding to the obtained remote code when said executor executes the first selected operation of the ~~computer~~ program corresponding to the obtained remote code.

7. (Currently Amended) The remote control system according to claim 1, wherein said first register registers continuation information corresponding to the first selected operation of the program in said the registration table, the continuation information indicating whether or not to continue to execute the first selected operation of the program, and

when said continuation information indicates the continuous execution, while said receiver receives the signal, said executor continues to execute the first selected operation of the program corresponding to the obtained remote code ~~decoded from the received signal~~.

8. (Currently Amended) A remote control program product stored on a computer readable media and executable by a computer with a receiver receiving a signal from a remote controller and decoding the signal to a remote code during remote control setting processing and remote control operation processing, said program product allowing said computer to carry out the steps of:

determining whether or not the remote code obtained by the receiver has been registered in the registration table during the remote control setting processing;

firstly registering a first selected operation of a program installed in the computer corresponding to the remote code obtained by the receiver in a registration table;

determining whether or not a second selected operation of a program should be registered corresponding to the obtained remote code upon determining that the obtained remote code has been registered in the registration table;

and secondly registering the another second selected operation of a the program corresponding to the obtained remote code in the registration table upon determining that the second selected operation of the program should be registered corresponding to the obtained remote code during the remote control setting processing;

determining whether or not the remote code obtained by the receiver has been registered in the registration table during the remote control operation processing; and

executing the first operation or the first and the second operations of the computer program corresponding to the obtained remote code when the obtained remote code has been registered in the registration table.

9. (Canceled)

10. (Currently Amended) The remote control program product according to claim 8, wherein said computer includes an operation table having a plurality of operations of the ~~computer~~ program and a plurality of operation identifiers corresponding to said plurality of operations of the ~~computer~~ program, and

the steps of registering each includes the steps of:

selecting the operation identifier corresponding to the first or second selected operation of the ~~computer~~ program from said operation table; and

registering the obtained remote code corresponding to the selected operation identifier in ~~said~~ the registration table.

11. (Currently Amended) The remote control program product according to claim 8, wherein the steps of registering each includes the steps of:

identifying one of data resources; and

registering the obtained remote code and the identified data resource corresponding to the obtained remote code in ~~said~~ the registration table, and

the step of executing includes the step of opening the data resources corresponding to the obtained remote code using the ~~computer~~ program.

12. (Currently Amended) The remote control program product according to claim 8, wherein said computer includes an operation table having a plurality of input operations and a plurality of operation identifiers corresponding to said plurality of input operations, and

the steps of registering each includes the steps of:

selecting one of ~~computer~~ programs;

obtaining an input operation from an input device;

determining the operation identifier corresponding to the obtained input operation in said operation table; and

registering the selected ~~computer~~ program and the determined operation

identifier in said the registration table.

13. (Currently Amended) The remote control program product according to claim 8, wherein the step of registering the first selected operation of the program registers a message corresponding to the obtained remote code in said the registration table, and

said remote control program product allows said computer to carry out the step of displaying the message corresponding to the obtained remote code when the step of executing executes the first selected operation of the computer program.

14. (Currently Amended) The remote control program product according to claim 8, wherein the step of registering the first selected operation of the program registers continuation information corresponding to the first operation of the computer program in said the registration table, the continuation information indicating whether or not to continue to execute the first selected operation of the computer program, and

when said continuation information indicates the continuous execution, while said receiver receives the signal, the step of executing continues to execute the first selected operation of the computer program corresponding to the obtained remote code ~~decoded from the received signal.~~
